Abstract: Based on the findings it was concluded that *C.infortunatum* leaves powder was observed to be comparatively safer, easily available, economical anthelmintic. The leaf powder of *C.infortunatum* may be used at the dose of 100 mg/kg b.w.against the common G.I. nematodes infections in calves. The aqueous extract of *C.infortunatum* possessed local anaesthetic, anticonvulsant and anthelmintic activities. The further research is required for isolation, identification and chemical characterization of phytoconstituents for development of lead compound out of *C.infortunatum*.
